Test Summary Report
E-commerce Testing Project

Project Overview

Project: SauceDemo E-commerce Testing
Tester: Gabriel Pokorasky
Testing Type: Manual Testing and API Testing
Tools Used: Postman, Jira, Google Sheets
Test Environment: Chrome – Desktop

Scope of Testing

The testing covered the following modules:

- Login
- Cart
- Checkout
- Product API

Test Execution Summary

Metric	Value
Total Test Cases	32
Passed	24
Failed	8
Not Executed	0

Defects Summary

Severity	Number of Bugs
High	4
Medium	2
Low	1

Defects by Module

Module	Bugs
Cart	2
Checkout	4
API	1

Key Findings

- Several validation issues were detected in the checkout module.
- The cart module displays incorrect decimal formatting for item totals.
- The product API returns status code 200 when requesting a non-existing product ID instead of returning an error response.

Conclusion

The application contains several functional and validation issues in the cart and checkout modules.
Additional fixes and regression testing are recommended before production release.
