E-commerce QA Testing Project – Test Plan v1.0	
Component	**Description**
Introduction / Objective	The objective is to validate functionality, usability, and API integration of the e-commerce platform to ensure a stable user experience.
Scope	Web: Login – Product browsing – cart – checkout | API: Products endpoint – cart endpoint
Out of scope	Payment gateway real integration - Security penetration testing - Advanced performance testing
Testing strategy	Functional testing – API testing – Exploratory testing – Regression testing.
Test Environment	Chrome and Firefox latest versions - Desktop and mobile responsive testing - Postman for API validation Demo staging environment
Tools	- Test management tools (Jira/Xray, spreadsheets) | API tools (Postman, RestAssured) | Automation tools (Selenium, Appium)
Risks	API response latency - Test data inconsistency - Browser compatibility issues
Deliverables	- Test cases - Bug reports - Test execution reports - Evidence (screenshots/logs)

Entry / Exit Criteria	Entry Criteria: Environment ready - Requirements available Exit Criteria: Tests executed - Critical bugs resolved - Test summary completed
