Jira Bug Report Examples

QA E-commerce Testing Project

Tester: Gabriel Pokorasky

Bug Example 1

Bug ID: KAN-10

Summary: Checkout form accepts invalid data format without validation error.

Module: Checkout

Steps to Reproduce:
1. Navigate to checkout page.
2. Enter an invalid postal code or email format.
3. Click continue.

Expected Result:
The system should display a validation error message and prevent the user from continuing the checkout process.

Actual Result:
The system allows the user to continue without displaying any validation error.

Evidence:
Screenshot showing invalid data accepted by the checkout form.

Bug Example 2

Bug ID: KAN-11

Summary: Checkout is allowed with an empty cart.

Module: Checkout

Steps to Reproduce:
1. Navigate to checkout page.
2. Ensure the cart is empty.
3. Attempt to proceed with checkout.

Expected Result:
The system should block the checkout process or redirect the user to the products page.

Actual Result:
The system allows the checkout process to continue even when the cart is empty.

Evidence:
Screenshot showing checkout process started with no products in the cart.

Bug Example 3

Bug ID: KAN-15

Summary: API returns status 200 when requesting a non-existing product ID.

Module: API

Steps to Reproduce:
1. Send a GET request to the endpoint GET /products/9999
2. Observe the API response.

Expected Result:
The API should return status code 404 Not Found or an error message indicating that the product does not exist.

Actual Result:
The API returns 200 OK with an empty response body.

Evidence:
Postman request showing status code 200 with empty response.
